

Open Mobile 3.2.0.200 for iOS Release Notes

VERSION 1.0, OCTOBER 2013

These release notes contain the latest news and information about iPass Open Mobile 3.2.0.200 for iOS.

New Features

iPass Open Mobile 3.2.0.200 for iOS is a patch release with bug fixes but no new features.

System Requirements

iPass Open Mobile 3.2.0.200 for iOS requires the following:

- iOS 5.0 or later.
- iOS multitasking support (for example, iPhone 3GS or later, iPod Touch third generation or later, or any iPad).
- Users need an iPass account in order for the service to function. In addition, the user must be connected to the Internet (by Wi-Fi or Mobile Broadband) to activate Open Mobile.

Supported Languages

Open Mobile is available in English, French, German, Spanish, Italian, Korean, Japanese, Thai, Simplified Chinese, and Traditional Chinese.

Resolved Issues

This release of Open Mobile 3.2.0.200 resolves the following issues:

Issue ID	Description
123770	All text on the main dashboard is displayed properly.
123748	The authentication process should work properly when a user is connecting to a hotspot with an iOS 7 device.
123698	The Open Mobile application works properly on the iPhone 5S.
123674, 123420	The Hotspot Finder and Send Logs option function without issue on iOS 7 devices.
120386	Now that there is an in-app Hotspot Finder, there is no longer an issue navigating back to the

Issue ID	Description
	home screen of the Hotspot Finder after navigating to an outside website in the Hotspot Finder (like an airline website from the Inflight tab).

Known Limitations

iPass Open Mobile 3.2.0.200 for iOS has the following limitations:

Issue ID	Description
123066	Due to a limitation in iOS, Open Mobile does not support a Session Timeout Limit less than five minutes (even though this is configurable in the Portal).
122868	Wi-Fi Roaming Alerts require a user's device to be running on iOS 6.0 or higher.
120049	Due to a limitation on iOS 6.0 or later, if a user is logged in to a network that they add to the Manual Login list, logging off and logging back in right away through Open Mobile will work as if the network were still an iPass network (and not a Manual Login network). The user can fix this by disconnecting from the network directly through iOS (Settings > Wi-Fi) before trying to reconnect.
117751	On branded clients with iOS versions 5.0 or earlier, the app navigation bar does not reflect the modified Navigation Bar Color of the branded client.
117543	The PIN field does not support entry using a non UTF-8 keyboard.
117522	When Open Mobile is installed on an iPad, location services are enabled in device Settings .
115964	If Open Mobile is running in the background and the device is switched off, data usage that occurred while Open Mobile was running in the background will not be counted correctly.
n/a	Open Mobile will cache a DHCP-assigned IP address. However, when later attempts to connect are made, no attempt is made to determine if the IP address is valid. As a result, some connections may fail unless the DHCP address is manually refreshed.

Known Issues

iPass Open Mobile 3.2.0.200 for iOS has no user-impacting Known Issues.
