## Known Issues

Issue ID	Description
131194	OM client does not get invoked in Safari when trying one-click cookie activation. Observed only on 10.11 beta 2.
124864	A roaming alert may fail to display when the user connects to a roaming mobile broadband network.
119611	The progress indicator for the Speed Test may remain on the screen after the test is finished.
116987	An Ethernet connection will not be inherited by IPass if the user hot plugs the new Ethernet connection. In order for the connection to be inherited, the user must hot plug the new connection while IPass is running and then exit and restart IPass.
115843	A connection with a static IP will not be inherited by IPass.
115488	A connection will sometimes fail to be inherited, even though the Internet is reachable and the VPN is connected.
114662	If you quite IPass while a VPN connection attempt is in progress and the machine is placed into sleep mode and then resumes, IPass will neglect to close the VPN browser.
113152	In rare cases, the Quick Launch bar will not appear. In order to display it, the application will need to be restarted.
111585	If a branded Application Name is the same as a folder that already exists on the computer, installation may fail and any currently installed version of IPass may be uninstalled as a result.
110054	When the profile is updated, the save password, pre-defined domain, VPN, RSS, Branding, and auto-connect features may not appear until the IPass client is restarted.
109891	The network list or Mobile Broadband Settings may not refresh when a 312U Card is plugged in and the user inserts or removes the SIM card.
109841	In some cases, a mobile broadband network to which the user has previously connected may persist as the current network even when the mobile broadband device is not inserted into the machine.
105016	When the user signs out of GoGo InFlight, IPass may continue to show the network as connected even though there is no valid connection to the Internet.
