Technical Requirements

Using the iPass Open Mobile Portal requires an Internet connection and one of the following browsers, with both JavaScript and Adobe Flash Player 10 enabled:

- Internet Explorer version 8 or later.
- Mozilla Firefox version 3.5 or later.

Resolved Issue

The following issue has been resolved for this release of the Open Mobile Portal:

Issue ID	Description
114779	For the User Activity report, downloaded data in Excel format can now contain more than 65,535 records.
114723	On the **Manage Assignments** page, a space can now be included after the Company ID when searching.
114337	For Android client versions earlier than 2.0.0, Publish to Test no longer fails for a profile which has been created from another profile (by copying or editing) with a brand configured.
114114	After adding new privileges to a Role, they will show up correctly on the Roles page.
113825	The grid on the **Manage Assignments** page will not show inconsistently after clicking **Cancel** and reloading the page.
113731	In the live branding preview, the Application Title element is correctly labeled,
113485	In the live branding preview, during brand creation, the default title text does not change if the software version is created.
111125	For the Mac installer, the installer logo displays correctly in the preview.

Known Issues

The following issues are known for this release of the Open Mobile Portal:

Issue ID	Description
155548	When you delete a published version of a profile (2.000 or 3.000 for example), you have to republish the profile to production or the profile update will not work (on Android the profile will not activate).
115318	The End Date is not showing up in the VPN Records in the User Activity report (but it is showing up in Recent Activity report).
115290	Wifi Mobilize 1.1.0 brands are shown for Open Mobile 2.2.0 for Android profiles.
115274	If the same image file is used for the Provider logo in a Service Package and the logo for a client brand that is applied to a profile using that Service Package, the profile cannot be published. Make sure you use unique names for the Provider Logo image file and any image file you use in client branding.
115262	If device notification is enabled for a Windows 2.x brand and the message is not custom and localized in Japanese, there is no default Japanese message.
115261	When configuring the domain for a profile account, you will get an error if you select **Use the following Domain** and enter a registered domain in the unregistered domain list then click **Save**.
114393	For Android 2.2 profiles, the iPass default brand is erroneously shown in the Brands page when a profile is migrated from Android 2.1 to Android 2.2.

Issue ID	Description
114339	Brand sharing allows a brand to be shared with a child customer, even though the service package has not been assigned to the child company.
114282	The font will appear very large in the emailed Trial and Pilot agreements.
114040	Accounts can be saved without entering an authentication format. If so, then the client will try to authenticate with an empty format (and fail).
113766	The first service package published by a partner admin becomes the default package, without giving any warning.
113755	After creating a brand as part of a service package, and deleting the platforms to which that brand was assigned, and then attempting to create a new brand with the same name as an old one, the Portal will report that the brand name is already in use even if the brand is no longer visible in the list of brands.
113213	In Windows 1.4.x clients, the same message is configured for all required endpoint applications. If this client is migrated to Windows 2.x, this message will be used as the default for all required applications. This can result in a confusing user experience as the same message is displayed multiple times. When migrating from 1.4.x clients, make sure to configure different messages for each required application.
107283	Use of some foreign-language characters (for example, å, ä or ö) in a profile name will lead to a "corrupt profile" error when the profile is installed.
107225	Branding live preview does not show changes to the application bar.
105232	If the user is on the Export Data report when the Portal times out, it is still possible to download the report by clicking the download link.
