

# ***IPASS SMARTCONNECT SDK v1.5.2 FOR ANDROID RELEASE NOTES***

VERSION 1.0, FEBRUARY 2017

## **New Features and Enhancements**

iPass SmartConnect SDK for Android 1.5.2 added the following features:

- **Connection enhancements:**
  - Android client now performs additional internet check on certain connection failures so that successful auth failover reconnection attempts are now accurately reported. Previously, iPass client software reported connection failures even when the transaction server successfully authenticated the user. New SQM error codes are added for cases which are prefixed by “9”.
- **Added connectionStatusCode to the metadata to help track unhandled connection status codes.**
  - To better analyze and diagnose connection failures reported by the client, the metadata sent by the client contains the connection status code. This log service console can be used to search for the error codes reported by the client.

## **System Requirements**

iPass SmartConnect SDK for Android has the following requirements:

### **Operating System**

Android Jelly Bean and later.

### **Additional Software**

Must have ObjectMapper 2.2.0 installed.

## Hardware

Devices based on armeabi, armeabi-v7a and arm64-v8a architecture.
